## Education

---

**Virginia Tech** Blacksburg, VA  
**Bachelor of Science in Computer Science** Expected Graduation Date: **December 2026**

- **GPA:** 3.88
- **Relevant Coursework:** Software Design and Data Structures, Intro to Software Design

## Technical Skills

---

- **Languages:** Python, Java, JavaScript
- **Developer Tools:** GitHub, Git, Jupyter Notebook, Postman
- **Technologies:** FastAPI, Flask, Express.js, Node.js, React.js, AWS (Lambda, SNS), MongoDB, Firebase, Redis, PostgreSQL, Pandas, Selenium, Playwright, Tailwind, Bootstrap

## Technical Experience

---

**Hume Center** Jan 2024 - Present  
**Undergraduate Researcher** Blacksburg, VA

- Created **Python** scripts to extract data on companies affected by ransomware attacks from dark web sources
- Leveraged **Pandas** to analyze file extensions commonly found on Dark web platforms, facilitating a detailed categorization and breakdown of their prevalence.

**Spanalytics** June 2023 - August 2023  
**Software Engineer Intern** Glen Allen, VA

- Developed secure backend endpoints using **Express.js**, enabling seamless retrieval of user files
- Utilized **JavaScript** to enhance user experience by efficiently fetching data from backend endpoints, ensuring optimal performance
- Managed **Redis** database server, maintaining compatibility with PANalyzr software by accurately storing and promptly retrieving version numbers for user inputs
- Optimized front-end data validation by cross-referencing user inputs with Redis data, achieving accurate results and enabling swift user interactions, leading to a **50% reduction** in compatibility-check latency

**Spanalytics** June 2022 - August 2022  
**Cybersecurity Intern** Glen Allen, VA

- Conducted penetration testing on a variety of network devices, including routers and switches, using Linux-based tools such as **Nmap**
- Validated the functionality of network devices by using **Wireshark** to analyze network traffic and configure data onto a spreadsheet, resulting in a **15% reduction** in network downtime

## Projects

---

**Novus** | *Flask, React.js, PostgreSQL, Selenium, Bootstrap* May 2023 - August 2023

- Built a full-stack stock market analysis app enabling users to get automated news alerts using **Selenium**
- Developed an interactive AI bot using ChatGPT through the **OpenAPI** platform, providing personalized stock market advice and dynamic user interactions

**COVID Data Analyzer** | *React.js, Firebase, Bootstrap* January 2023 - April 2023

- Developed a **React-based** COVID data web app, empowering users to access and visualize state-specific COVID data via widgets and used Firebase to implement two-factor authentication
- Utilized WHO Covid Rest API, effectively visualizing data trends using APEX Charts
- Integrated **AWS SNS** for real-time SMS notifications, delivering the latest COVID data insights directly to users
- Received **scholarship** from school board for project impact and design **out of 19 students**
